It is imperative that satellite radio be allowed to offer local programming. Obviously, there is a need since the local stations don't provide it. Personally, it is THE ONLY WAY I can find out what the situation is when I plan to travel beyond my own little world. I say, the more, the better! Satekkite radio is now my MAIN source of news, music, and other information. The FCC has not required local stations to over decent service, don't try to suppress satellite radio!
